

AirPLAi Demo Trial Project

Domain Expansion Demo

Company	AirPLAi Sports	Role	Engineering (General)
Time Budget	8–12 hours	Due Date	1 week from receipt
Submit To	arman@airplaisports.com, amaan@airplaisports.com	Presentation	Short video submission

Overview

AirPLAi is the AI sports video intelligence layer for all levels of all sports. We turn raw game footage, sensor data, and operational workflows into structured, searchable intelligence for teams, leagues, businesses, and creators.

Your challenge: Using any and all information you can find, build a demo showing how AirPLAi's technology could be applied to a sport of your choice, **other than basketball or pickleball**. The demo should be functional enough to put in front of a potential investor interested in our offering for that domain. Not every feature needs to be fully functional (e.g. PLAiChat), but the experience should be credible and tell a clear story.

The Problem

Our product is most developed in basketball. Every new sport is a potential vertical, but before we commit to building a full computer vision pipeline for a domain, we need a way to show investors and partners what AirPLAi looks like *in that sport*.

That is this project: a credible, functional-enough demo for a new domain, built on publicly available data, with no actual inference or CV required.

Dimension	Target
Audience	A potential investor or domain partner
Goal	Demonstrate AirPLAi's value in a new sport
Data	Publicly available data is sufficient
CV / predictive work	Not required — features can be mocked where needed
Bar	Functional enough to demo live and tell a compelling story

Your Project

Part 1: Domain & Design (2–4 hours)

Pick your sport and decide what AirPLAi should surface for it. Research the domain and justify your choices:

- What advanced statistics matter in this sport, and why
- What visualizations best communicate them (shot charts, heat maps, field/pitch/court diagrams, etc.)
- What example queries or insights an investor/prospective user would find compelling
- Which AirPLAi features you will replicate, and which you will mock

Explain every decision based on your domain expertise and any research you do. This reasoning is as important as the build itself.

Part 2: Working Demo (4–6 hours)

Build and deploy the demo.

Requirements:

- Runnable locally with a clear README (all data available via a backend or the repo itself, so it is fully reproducible)
- At least one test
- Use whatever language/framework you are most productive in
- Deployed to a public URL (Vercel, Netlify, or similar)

Part 3: Technical Writeup (1–2 hours)

Explain the decisions behind your build:

- Backend, cloud, and URL hosting choices
- Any other important technical decisions and their tradeoffs
- What you would change or add with more time

What You Have Access To

Resource	Details
PLAi Ground (live product)	app.airplaisports.com — navigate to GBA League , passcode: “ GBA2025 ”. The most developed version of this offering.
Pickleball demo	pickleball-demo.airplaisports.com — an example of how we demonstrate AirPLAi’s value in a new domain. Don’t feel constrained by this style, but it should give you an idea of what we’re looking for.
AirPLAi website	airplaisports.com
Our deck	tinyurl.com/airplaideck

Importantly, you do NOT need to run any computer vision pipelines or do deep predictive analysis. Publicly available data is sufficient.

What you do NOT have access to: our codebase, internal CV pipelines, or internal APIs. We want YOUR approach, not a recreation of ours.

Evaluation Criteria

Criteria	Weight	What We Look For
Domain Expertise	25%	Stats, visualizations, and queries reflect how the sport actually works.
Demo Quality & Investor-Readiness	25%	Polished, credible, and compelling enough to show an investor.
Technical Decisions	20%	Sound backend, cloud, and hosting choices. Justified tradeoffs.
Working Code & Reproducibility	15%	Runs cleanly from a clean checkout. Data included. Tested.
Communication	15%	Clearly explains and justifies the decisions made.

Deliverables

1. Deployed URL (Vercel, Netlify, or similar)
2. Code repository with a clear README — runnable locally and fully reproducible (all data available via backend or repo)
3. At least one test
4. A written explanation of your backend, cloud, and URL hosting, plus any other important technical decisions
5. *(Optional)* A short video walkthrough of the demo

Email deliverables to arman@airplaisports.com and amaan@airplaisports.com by the due date.

What We Value

We are an early-stage startup. We move fast, ship constantly, and care deeply about the sports communities we serve. We are not looking for a perfect system. We are looking for evidence that you:

1. Think clearly about hard problems
2. Make pragmatic engineering decisions
3. Bring real domain expertise to a new sport
4. Can build something real, not just describe it
5. Would make our team better

If you have questions, email arman@airplaisports.com. Asking good questions is part of the evaluation.

Good luck. We are excited to see what you build.

AirPLAi Sports — AI-Powered Sports Intelligence
